Summary

Senior Frontend Engineer with 5+ years of commercial experience in React, React Native and TypeScript, focused on fintech and payments. I own features end to end: architecture, web and mobile build, tests on critical paths and release. I work directly with product and stakeholders, explain trade-offs in plain language, review code and mentor junior developers. I use Claude Code day to day to ship faster without skipping review.

Skills

Frontend: React, Next.js, TypeScript, JavaScript, Redux Toolkit, Zustand, TanStack Query, React Hook Form, Zod, Storybook, Tailwind CSS, Styled Components, i18next, PWA / Web Push

Mobile: React Native, Expo, native modules, BLE, biometric auth, secure storage, push notifications, App Store / Google Play releases

Payments: Stripe, PayPal, Mollie, Finix, checkout flows, A/B testing, feature flags

Testing: Jest, React Testing Library, Playwright

AI-assisted dev: Claude Code (CLAUDE.md, skills, subagents, hooks, plan mode), spec-first prompting, AI-assisted refactoring and tests

Backend & Cloud: Node.js, NestJS, Express, REST, GraphQL, WebSocket, PostgreSQL, Prisma, Firebase, Kafka, AWS (Cognito, SES, S3, CloudWatch)

Experience

HustlePey · Fintech, USA (remote) Sep 2023 – Sep 2026

Senior React & React Native Engineer

Payment platform for online and in-person merchants. Fully responsible for the web portal and the iOS/Android app.

- Integrated Stripe, PayPal and Mollie into one checkout flow on web and mobile (provider callbacks, payment states, error handling), reducing failed payments by ~20%.
- Built the merchant web portal end to end with React, Next.js and TypeScript: dashboards, payment and transaction views, role-based access; used daily by ~1,500 merchants. Cut initial load time by ~35% with code splitting, caching and list virtualization.
- Owned the mobile app (iOS/Android): project architecture, biometric auth, secure token storage, push notifications and App Store / Google Play releases.
- Rolled out checkout flows behind feature flags with A/B tests on onboarding; covered payments with unit and component tests (Jest, React Testing Library) and end-to-end scenarios in Playwright.
- Built Kafka producers and consumers for event exchange with the payment and alerting services in a multi-service architecture; worked with AWS: Cognito (MFA, social login), SES, S3, CloudWatch.
- Introduced an AI-assisted workflow with Claude Code across the team: shared CLAUDE.md conventions, reusable skills for components, tests and migrations, and hooks for lint and type checks. Speeds up routine feature work while every AI-generated diff still goes through code review.
- Ran code reviews, mentored 3 junior developers and presented demos to customers.

Rendin · PropTech, Poland (remote) Oct 2021 – Aug 2023

React & React Native Developer

Rental platform for landlords and tenants: listings, tenant verification and protected rental agreements on web and mobile. Team of 6 developers.

- Built the agreement pipeline: a shared draft both parties edit until it is locked for signing, digital signatures from either side and a generated PDF; used for ~10,000 signed agreements.
- Built the rent ledger shared by both sides: scheduled charges, payment status, automatic reminders before the due date and a debt view that triggers the claim flow; reminders cut late payments by ~25%. Unit and component tests keep the signing and charge logic safe to refactor.
- Delivered mobile building access: a BLE digital key for the entrance and apartment lock through a native module, time-limited QR/Bluetooth passes for guests, and automatic suspension of access when rent goes unpaid.

Weblines · Digital studio, Ukraine Oct 2020 – Sep 2021

Frontend Developer

- Built 15+ landing pages and small web apps from Figma mockups: responsive markup, forms and validation; Lighthouse performance scores of 90+.
- Integrated client sites with APIs, CMS and analytics.
